

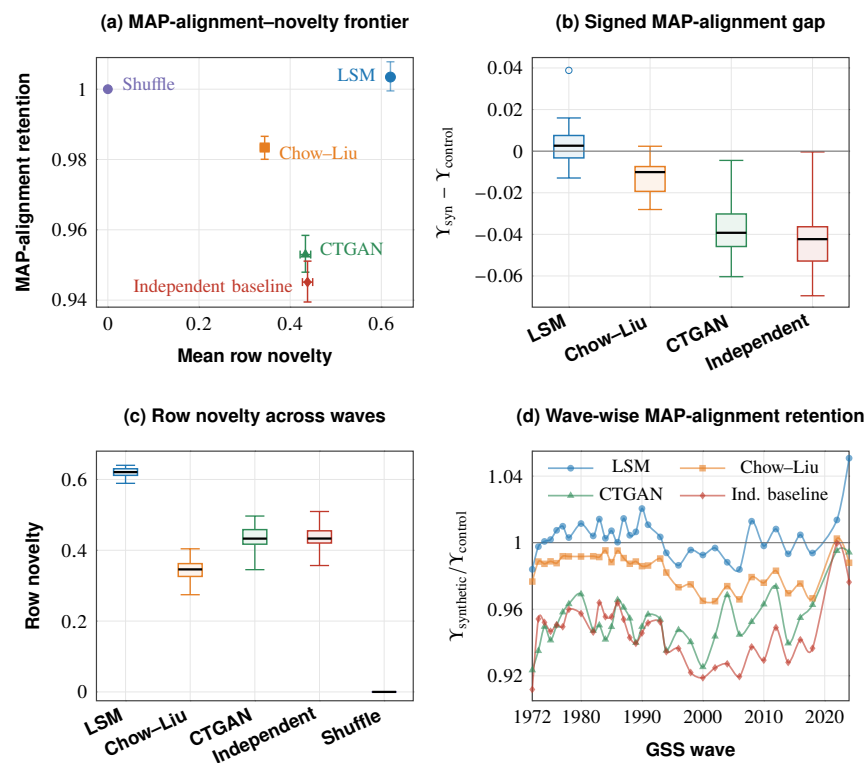

Fig. 1. Four complementary views of the GSS benchmark. (a) Cross-wave MAP-alignment–novelty frontier with nonparametric 95% wave-bootstrap intervals. (b) Wave-level signed MAP-alignment differences from the original-row control. (c) Wave-level row novelty, defined as one minus mean nearest-real similarity. (d) MAP-alignment retention by GSS wave. The label “Chow-Liu” denotes the restricted Chow-Liu hybrid.
